MARCO NOCH

PARTNER & TECHNICAL DIRECTOR

Marco Noch is partner and technical director of Evolution Design. Since joining Evolution Design in 2004, he has played an instrumental role in the expansion of our expertise on technical solutions, legal frameworks and sustainability.

Marco has strong technical knowledge and researches the market for innovative materials and techniques in order to develop tailor-made project solutions for our clients' specific needs and objectives. Marco is also in charge of quality control and integrates the latest construction methods in all our projects. He ensures a seamless translation of the project concept into detail design and project execution.

In his role as technical lead, Marco has worked on a number of projects that have adopted cutting-edge techniques for energy saving and

resource management, including the Miner-gie-certified residential development K.I.S.S. and the sports hall Neumatt, the iconic office building Cocoon and the striking single-family house Flexhouse.

His attention to detail and technical know-how played an important role in the reconstruction of the NZZ print works and, most recently, the headquarters of global chocolate manufacturer Barry Callebaut. Partnered with expert consultants, Evolution Design developed a tailored sustainability standard to achieve the client's environmental benchmarks.

» Our projects are a result of great teamwork: they are a synergy of highly skilled engineering knowledge and cutting-edge creativity with an extra focus on the emotional needs of the user.
